GitHub Submission Guide

Example: Vesper Ding (vesperding) - Jie Ding (JD)

1 Open the lab repository

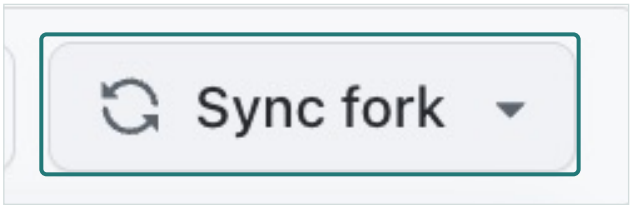

Open **github.com/Interactive-Realities-Lab/lab**. Sign in; find **Fork** at the top right.

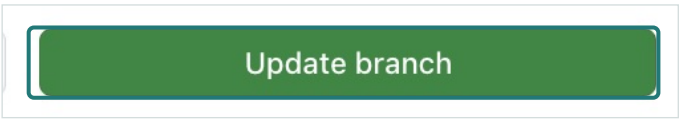

2 Fork once, or sync your fork

Click **Fork**, choose your account as Owner, then **Create fork**. Already have a fork? Click **Sync fork** → **Update branch** before editing.

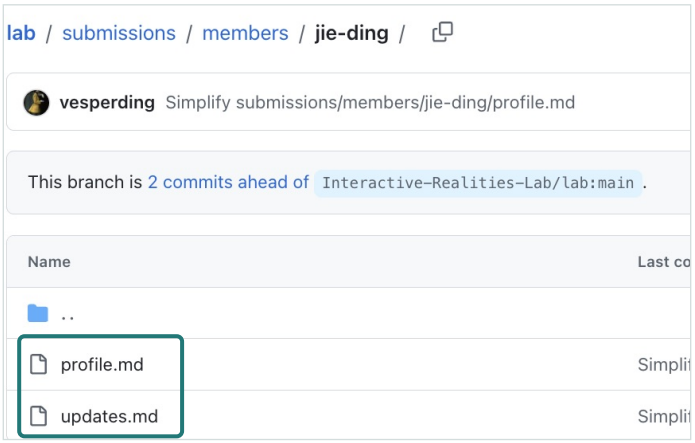

3 Open your own member folder

In your fork, select **main**. Open **submissions** → **members** → **your folder**. Open **profile.md** or **updates.md**.

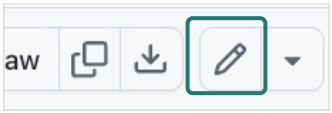

Edit in your own fork. Use your own name and member folder.

GitHub Submission Guide

Example: Vesper Ding (vesperding) - Jie Ding (JD)

4 Edit profile.md or updates.md

Open the file and click the **pencil**. Replace current information in **profile.md**; add news, papers, and project updates at the top of **updates.md**. Keep using these two files.

```
## [Title]

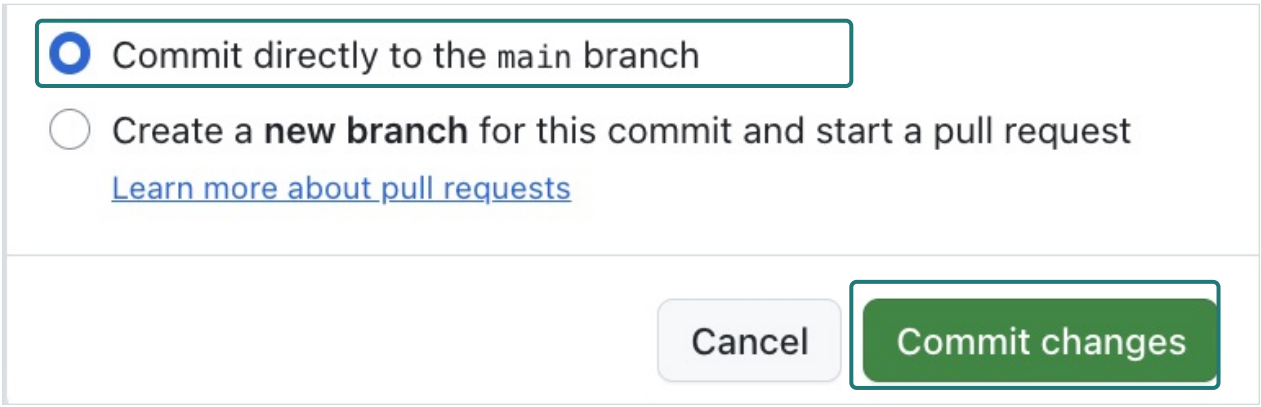

Date: [YYYY-MM-DD]

Details: [What happened, your contribution, and paper status if applicable]

Links/attachments: [Public link or uploaded filename; remove if unused]
```

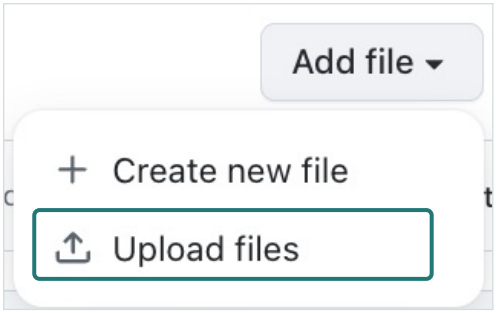

5 Commit each edited file

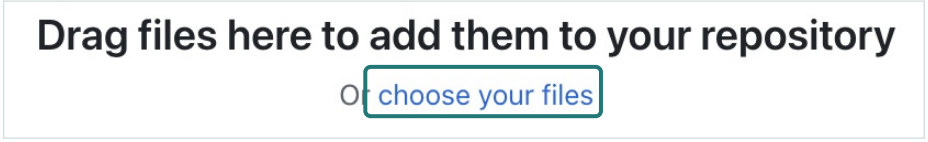

Click the top-right **Commit changes...**, enter a short message, choose **Commit directly to main**, then click **Commit changes**. Repeat steps 4-5 for the other file if needed.

6 Upload a photo or attachment

For your first profile, upload a photo; other uploads are optional. In the **same member folder**, click **Add file** → **Upload files**, choose your file and **Commit changes**. Write its exact filename in the Markdown; repeat steps 4-5.

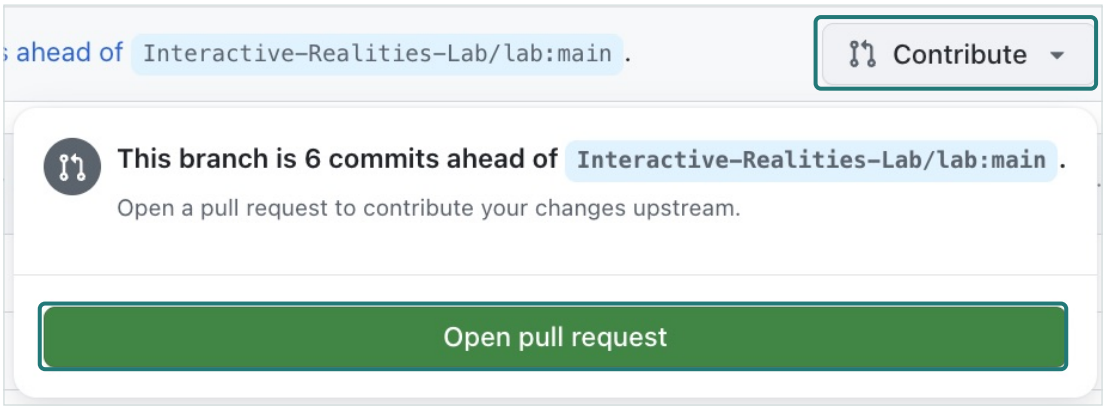

After a request is merged, sync your fork before starting the next update.

7 Start one pull request for all files

After all edits and uploads are committed, click **Contribute** → **Open pull request**. Include all related files in one request.

8 Check the destination and source

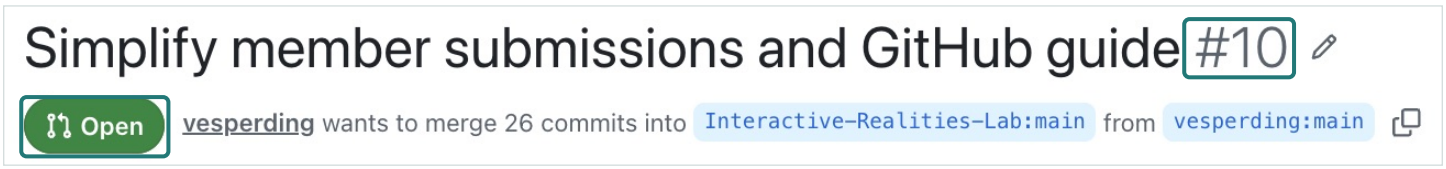

Check **base: Interactive-Realities-Lab/lab · main** and **head: your fork · main**. Review the changed files.

9 Create the request and confirm Open

Click **Create pull request** if the form is not yet shown. Add a title and short description. Keep **Allow edits by maintainers** checked if shown, then click **Create pull request**. Check the **Open** label and request number.

Open request? Keep editing and committing on its same source branch; it updates automatically.
